

# COMPANY FACT SHEET

## Facts at a Glance

- CEO Paul Tien
- Founded 2013
- Corporate Headquarters Silicon Valley, USA
- Global File Services
- Hybrid Cloud Architecture to address multisite file sync and lock
- CacheDrive gateway with cache for near-LAN speed cloud access
- Supports Windows, macOS, and Linux clients
- Active Directory, Azure AD
- Access Audit
- GDPR, HIPAA compliance

Newark CA 94560 USA

## Follow us:

## Company Profile

Morro Data provides high-performance hybrid cloud file server to manage enterprise data and enable global collaboration. Morro Data CloudNAS is a cloud-centric next-generation architecture with the familiar interface of network attached storage for a local cache.

The current CloudNAS 7.0 is used by many large and small enterprises in design, manufacturing, retail, and other fields for their multisite collaboration. Data is stored safely in the cloud and is readily available to the user either on premises or in the cloud through the SMB interface.

## Operations

Morro Global File System, the heart of the technology, runs on the AWS platform in multiple geographic regions for our global users. We also work with multiple leading cloud object storage providers to provide reliable and secure solutions to our customers.

In 2018, Morro Data achieved 5X growth and was selected by TechTarget / SearchStorage as one of the Eight Data Storage Startups to Watch in the same year. With fast growth, Morro Data is cash-flow positive by the end of 2019. We were recognized by CRN and named to its list of the Storage 100 of 2020 and 2022.

## Our Vision - From NAS to CloudNAS

Morro Data has the vision of advancing the ubiquitous NAS technology to the cloud-scale. No more RAID maintenance, no more running out of capacity, and no more endless backup and replication. With CloudNAS comes cloud reliability and scalability, and the Morro Global File System extends NAS functionality to CloudNAS' global scale at multiple sites.

## Our Mission - Migrate and Manage

There are millions of traditional file servers and NAS waiting to be migrated to the cloud. While preserving the original file server interface, Morro Data CloudNAS effortlessly migrate and manage large amount of data with a high-performance hybrid cloud solution.

## Industries Served

Architecture,  
Engineering,  
Construction

Education

GIS &  
Surveying

Managed  
Services

Manufacturing

Marketing

Media &  
Entertainment

Oil & Gas

Morro Data CloudNAS is used by a wide spectrum of industry verticals. We proudly provide services to customers in the following industry sectors: AEC, Media, Technology, Mining, Finance, Manufacturing, Retail, Education, and Professional Services. Customer locations include North America, Europe, APAC, Latin America, Middle East, and Africa.
