

# Enhancing Reliability: Morro Clone for Rapid CacheDrive Duplication

**Morro Clone** is a new Morro application designed to facilitate the seamless migration of cached data from one CacheDrive to another within the same LAN. By leveraging LAN-based data transfer, Morro Clone minimizes reliance on Internet bandwidth usage and eliminates cloud egress fees.

## Key Features

### Cost Saving Migration

Easily transfer cached data between CacheDrives without Internet bandwidth constraints or cloud storage egress fees.

### Compatibility

Fully compatible with all Morro CacheDrives and share types, ensuring seamless integration into existing infrastructure.

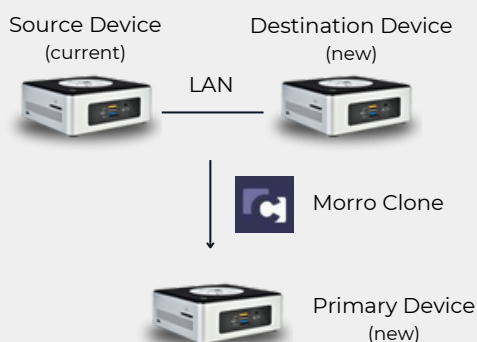

### Scheduled Tasks

Schedule clone tasks to run during off-hours, minimizing disruption to regular operations.

## Use Cases

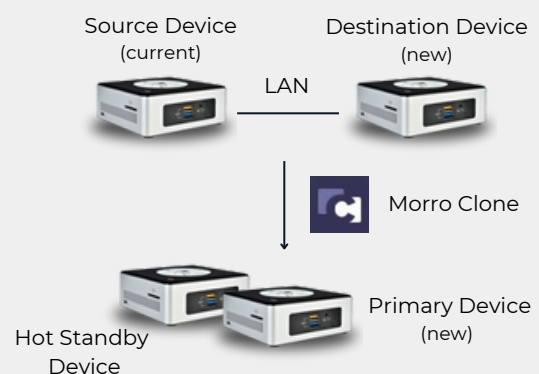

### CacheDrive Replacement

Minimize disruption to regular operations

### Deploy Hot Standby Devices

Continuous data availability and redundancy
